

RESEARCH FOR RESULTS

SoilBiotics products produce outstanding results in California celery crop.

An application of SoilBiotics' **3r - Growth Boost** and **CAL-10** combined with an organic nitrogen source produced markedly better results in this California celery crop, reversing what would have been a poor quality yield. The SoilBiotics products provided better nutrient uptake by the plant vs. plants receiving only the nitrogen, plus the application mitigated a very high salt index. A substantially more robust root system is indicated (as shown on the right).
