

THE DIRT!

SOILBIOTICS COMPANY E-NEWSLETTER

Spring 2026

Spring 2026 Newsletter

SoilBiotics Customers,

We believe in continuous improvement and are always looking to find products to meet our customers' needs now and into the future. One area we have been looking to expand the SoilBiotics portfolio is in fertilizers to support crops with nutrients throughout the growing season.

This year we have added the SB GRO line to SoilBiotics' offerings to provide growers with an organic fertilizer lineup to support plant health in both organic and conventional farming practices. A physical compatibility test is recommended. There are three different SB GRO products, all OMRI-certified, that can be in-furrow or foliar applied:

SB GRO 4-2-2 is an organic liquid fertilizer used as a starter. It is derived from plant-based ingredients and is an effective yet economical organic nitrogen source. SB GRO 4-2-2 is highly soluble with low molecular weight, making for fast mineralization, and contains high levels of naturally occurring fulvic acids.

SB GRO 7-0-0 is an organic liquid fertilizer that is applied mid-season. It is derived from soy protein hydrolysates and is one of the most efficient sources of organic nitrogen available. SB GRO 7-0-0 is highly soluble with low molecular weight, making for fast mineralization.

SB GRO 2-0-6 is an organic liquid fertilizer applied mid to late season. It is derived from fish-based ingredients and plant-based ingredients. It is an efficient, economical source of organic nitrogen and potassium.

As with all SoilBiotics products, we have conducted trials and quality tests to ensure these are products we can stand behind. We're excited to see it available to our customers this year and are ready to answer any questions you might have about the SB GRO products. Attached is additional information on these products and more details including trial results can be found on our website, SoilBiotics.com.

If you have any questions about these products or any other SoilBiotics products, please reach out to us.

Thank you,

Your SoilBiotics Team
